

• EXPRESSION OF INTEREST — PRE-LAUNCH • 2025

Train Healthcare AI on Clinical Datasets.

Without Downloading Them.

Auratral hosts India's premier medical research and healthcare datasets inside secure, isolated compute environments. Run your AI pipelines and diagnostic models directly next to sensitive health records, ensuring patient privacy is 100% protected.

Zero	VPC	IRB	1 Cr = ₹10
Raw patient records exported	Isolated per research session	Ethics protocol gated access	Compute credit billing

Auratral is India's first Compute-to-Data hosting platform built specifically for AI Healthcare and Medical Research. We host high-fidelity clinical datasets—including longitudinal EHRs, DICOM medical imaging, and genomics—within secure data vaults. Instead of transferring sensitive medical records, we provide approved researchers with a VPC-isolated sandbox next to the data. Train diagnostic models, run statistical pipelines, and export only final weights and validation metrics.

HOW ACCESS WORKS

1 ETHICS CLEARANCE

Verify IRB/IEC Medical Credentials

Provide your approved Institutional Review Board (IRB) ethics protocol number and sponsoring medical institution credentials. Sign the Clinical Data Privacy NDA before access.

2 SANDBOX PROVISIONED

Mount Chosen Medical Datasets

A dedicated VPC-isolated container spins up with your chosen medical dataset (e.g., oncology scans, cardiology EHR) mounted read-only. A web IDE loads in-browser instantly.

3 SAFE EXPORT

Export AI Weights & Research Metrics

Train diagnostic algorithms, validate research hypotheses, or run clinical analytics. Export only final model weights (.pkl / .onnx) and metrics. Raw records never leave the vault.

 **Runtime-Enforced Medical Data Governance**

Sandboxes run in isolated Virtual Private Clouds with blocked outbound network traffic. Medical datasets are mounted strictly read-only. Outgoing files undergo automated static scans to prevent raw patient record leakage—guaranteeing DPDP, HIPAA, and GDPR compliance at the infrastructure level.

THE RESEARCHER WORKSPACE

Auratral Secure Sandbox — Monaco Web IDE

VPC ISOLATED

- train_model.py
- preprocess.py
- /dataset (read-only)
- /exports

```

1 # Auratral Compute Sandbox • Dataset: Longitudinal ICU EHR
2 import auratral_sdk as aur
3 ds = aur.mount("AUR-EHR-00087", mode="readonly")
4 model = train_classifier(ds, epochs=50)
5 aur.export(model, fmt="onnx") # weights only - auto-scanned
          
```

RUNTIME

GPU: **A100 40GB**

Burn: **5 Cr/min**

Credits: **4,820**

Export: **Pending scan**

AI HEALTHCARE & MEDICAL RESEARCH ALIGNMENT

AI HEALTHCARE DEVELOPERS & RESEARCH TEAMS

- Diagnostic AI Model Training** on EHR, DICOM imaging, and genomics without data transfer delays.
- Ethics-Gated Access.** Skip months of data sharing negotiations. Verify IRB/IEC ethics protocol key for immediate access.
- Medical-Grade Compute.** Instantly access high-performance GPU/TPU nodes pre-configured with PyTorch and clinical libraries.

PHARMA, CROS & CLINICAL TRIAL LABS

- Real-World Evidence (RWE)** clinical trial analytics and pharmacovigilance studies on diverse India-specific registries.
- Compliance by Infrastructure.** Enforce HIPAA Safe Harbor, GDPR Article 9, and DPDP Act 2023 requirements at runtime.
- Immutable Research Audits.** Maintain regulatory-grade logs of every compute action, query history, and model weight export.

COMPUTE CREDIT BILLING

ANNUAL WORKSPACE LICENSE

1,237 Cr / yr

Initialize and maintain your secure medical database sandbox container for 12 months.

CPU COMPUTE

2 Cr / min

Data preprocessing, exploratory analysis, and statistical healthcare modeling.

GPU COMPUTE

5 Cr / min

Deep learning on medical images (DICOM), genomic sequences, and large model fine-tuning.

1 Compute Credit = ₹10. Credits are pre-purchased and consumed dynamically as your sandbox runs. Unused credits roll over. Exports carry no additional charge — only runtime is billed.

COMPLIANCE & GOVERNANCE

HIPAA Safe Harbor

Runtime enforced

GDPR Article 9

Zero-export aligned

DPDP Act 2023

India-native

IRB / IEC Gated

Ethics protocol verified

Reply to this email to get started

No commitment required. Share your clinical research use case and we'll reach out with early access details.

REPLY TO
connect@auratral.com

INCLUDE THESE FOUR THINGS IN YOUR REPLY

1 Organisation name and team that would use the platform.

2 Dataset type — EHR, DICOM imaging, genomics, clinical trials, etc.

3 Use case — diagnostic model, drug safety, research publication, etc.

4 IRB / ethics status — approved, in-progress, or not yet started.
